The authors regret that Figure 3 was replicated as Figure 4. The authors would like to apologize for any inconvenience caused. The correct Figure 4 is below:

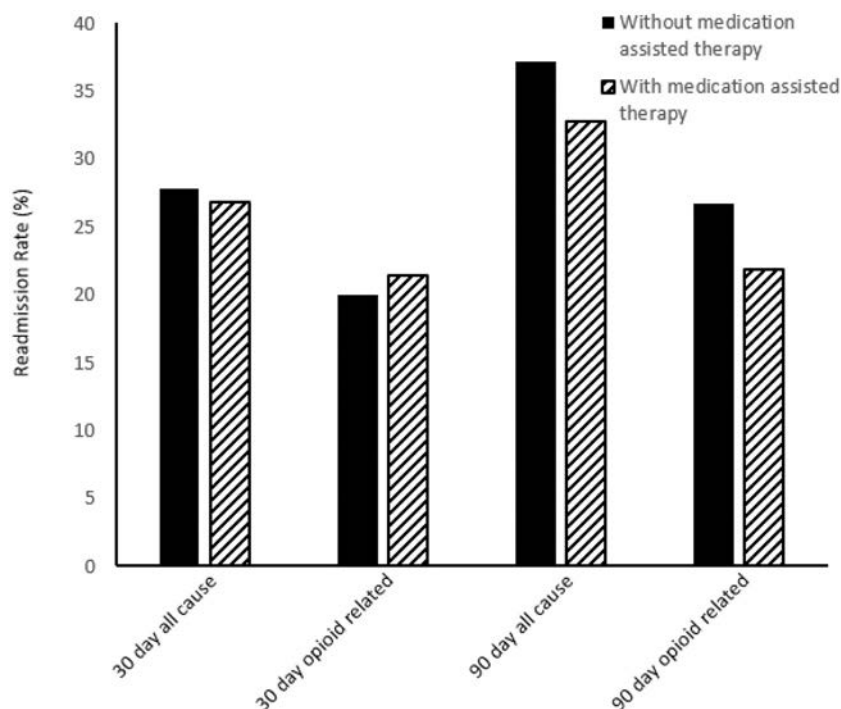

Figure 4 Readmission rate with and without inpatient medication-assisted therapy (see Methods or the Table for detailed description of these cohorts). There were some modest decreases in 30-day all-cause, 90-day all-cause, and 90-day opioid-related readmissions; however, none of these met the threshold for statistical significance.
